

Door with bridge view

Golden Ears Bridge

Vancouver

Design-builder: Golden Crossing Constructors -Joint Venture,
(Bilfinger Berger (Canada) and CH2M Hill)

Stainless steel security access doors

For this project, we were contacted by the owner to supply heavy gauge stainless steel doors and frames as the previously installed doors were not suitable for security purposes and they wanted to replace them for heightened security demands. We incorporated specific design features to ensure the door could not be pried open.

The doors were heavy gauge, 316 (marine grade) #4 stainless steel doors and frames. We also incorporated air ventilation grates as part of the design.

Close-up view

This is just one of many projects that we've done since 1966 in our Steel Door Manufacturing Group.
