

Codiac Transpo

Moncton, NB

Initially the customer was seeking frosted glass doors for the front overhead doors to achieve a certain look and feel. We recommended a polycarbon door, which achieved a similar aesthetic while saving 75% of the weight and providing significant cost savings on the project.

We also completed post-project modifications as requested by the client.

Products used for this project included:

- Polycarbonate sectional doors
- High speed doors. We installed a completely automated system using high-speed doors allowing for touchless entry into the fueling, washing and parking areas.
- Polycarbonate sectional doors
- Rolling Fire Doors
- Counter shutters
- Movable wall partition to separate two training areas

This is just one of the over 88,000 projects we've completed for over 6,000 customers in the last decade.

How can we help you with your next project?
