

## High-end stainless steel residential project

### Oceanfront

These doors and frames were developed for a high-end residence built next to the ocean. The owners were seeking corrosion-resistant and aesthetically beautiful windows and doors for their home.

To meet their needs, we designed and developed custom doors and frames for their requirements, including:

- **Frames:** 12-gauge, thermally-broken, 316 (marine grade) #4 finish stainless steel. There were 42 of the 4'x10' windows.
- **Doors:** 16-gauge 316, #4 stainless steel doors. There were 18 pairs of these 4'x8' doors.

This is just one of many projects that we've done since 1966 in our Steel Door Manufacturing Group.

**How can we help you  
with your next project?**
